

Shake Tile Rollforming Line

This high efficiency shake tile rollforming line produces tiles and shingles to the desired length. Parts are prestamped and embossed and then sheared to the desired length before being fed into the rollformer to form the sides for the locking function.

Key Features:

- 6,000 lb uncoiler with feed up drive and manual mandrel expansion to release the steel for Roof Tile panel
- Fully programmable servo feeder for different lengths and includes entrance basket rolls and strip guides.
- Hydraulic Press (est. 600 tons) to stamp the embossing and step features, and cut to length
- Length Control System with encoder and measuring wheel
- Powered Launching Conveyor to continuously move forward and align pre-cut parts with the rollformer.
- SAMCO Universal Roll former with factory laser aligned stands & shafts
